AHP PRECISION MAPPING AND DATA

A DIVISION OF AHP SERVICING LLC | KANSAS CITY

Construction documentation from the air.

We fly building sites on a schedule and turn each flight into maps, dated photos, and quantities your team can actually use. Owners, developers, and contractors across the Kansas City metro use our sets to track progress, verify work, and report to the people holding the money.

WHAT WE DO

Progress mapping. Scheduled flights over the whole site, flown the same way every visit, so progress reads clearly from one report to the next.

Orthomosaic maps. One true-to-scale map of the entire site, updated as the build moves.

Earthwork volumetrics. Cut and fill quantities and stockpile volumes measured from the air, ready for pay applications and verification.

As-built documentation. A dated aerial record of what went in and where, captured before the work gets covered up.

Thermal roof and envelope scans. A thermal rig finds moisture, heat loss, and problem areas on finished roofs and building envelopes.

Dated photo sets. Organized photos by link, ready to hand to tenants, lenders, partners, and bond holders.

HOW IT WORKS

1. We set a flight schedule that matches your build, weekly, by phase, or at milestones like pre-pour.
2. After every flight you get the maps, photos, and quantities by link, dated and organized. Nothing for your staff to fly, process, or file.
3. Your team forwards the set to whoever needs it. Your record builds itself from grading to handover.

First as-built flight is free.

We will fly your site once and hand you the full deliverables, at no cost, so you can judge the work before you spend anything. After that, pricing is quoted per job, based on your site and your schedule. No packages, no pressure.

FAA Part 107 licensed pilots • Fully insured • RTK-equipped aircraft, including thermal • Kansas City based, serving the metro and Wyandotte County
